

49-600/424 600 - Flush End Cap (Satin Stainless Steel 316, 1.67" OD (0.08" Wall))

The 600 flush end cap provides a simple and smooth, flush finish to the end of a tube. Place the neck of the end cap inside the tube and fasten into place using item LB-00201 for brass and item LB-00201 with 00211 for stainless end caps.

Flush end caps can be used at the end of a handrail, on the top of a railing post and at the end for bar foot rails.

Note: this end cap is designed to have a neck that fits INSIDE tube, not over it.

Consult local building codes for rail height, wall offset, railing termination and other requirements.
